Tracking the Gaps	2
Population tables	6
Household tables	9
Housing tables	10
Income tables	12
Employment tables	14
Education tables	15
Disability and caring tables	18

How to read the data tables

The first five pages of tables are the called Tracking the Gaps. These are summary tables with data from subsequent tables on specific topics. The Community Indicators Table lists a series of socio-economic indicators, and shows the Aboriginal rate in the last three Censuses, the change over recent years, the non-Aboriginal rate, and the difference, or gap, between the rates.

Most of the topic tables in the report have a similar arrangement. Each row shows one of the categories in the topic. The columns usually show the number of Aboriginal residents of Sampleton in each category (the rows), and the proportions and differences from:

- the non-Aboriginal population of Sample
- the Aboriginal community in NSW, and
- the Aboriginal community of Sampleton in 2006 and 2001.

The 'Aboriginal diff' is the proportion in the local Aboriginal community minus that in the non-Indigenous community.

The 'local diff' is the proportion in the Aboriginal population in Sampleton minus that in the NSW Aboriginal community.

The 'change 06–11' column shows the proportions of Aboriginal people locally in 2011 minus the proportions in 2006, unless otherwise stated.

Where differences are less than 1%, they are shown as '0% more' if slightly positive, '0% less' if slightly negative.

Note that percentages are rounded to the nearest number, and so when added may differ slightly from the total shown.

Some people did not complete all the questions on the Census form; when this occurred, they are shown in the tables as 'not stated'. Where the number of people in a table of Census data is just a few, the ABS randomly changes the number to protect privacy, generally to either 0 or 3. This means very small numbers are not accurate and some columns may not add up exactly.

Tracking the Gaps

This tables lists a series of socio-economic indicators, extracted from the subsequent Topic Tables. For each indicator,

- the first three columns shows the Aboriginal rate in the last three Censuses,
- the next pair of columns show how this rate changed between the 5-yearly Censuses,
- the next three columns shows the non-Aboriginal rate for Sampleton in the three Censuses,
- the right hand columns shows the difference, or gap, between the Aboriginal and non-Aboriginal rates, and the changes in this gap.

Note that indicators and gaps are rounded so may not add up exactly.

The change over 2001–2011 is between the resident population in 2011 and the overnight population in 2001. Source: Census 2011 Table I02, 2001 Table I02

The **gender ratio** is the ratio of the number of males and females. The Gender ratio is shown as "=" if numbers of males and females are equal. If there are more males, the ratio is (males ÷ females) and is shown in blue, say, **1.5 M:F** if 3 men and 2 women. **M** means all males. If there are more females, the ratio is (females ÷ males) and is shown in red say, **1.6 F:M** if 8 women for 5 men. **F** means all females.

Source: Census 2011 Tables I03, I04; Census 2006 Tables I03, I04; 2001 Tables I02, I29. Differences are calculated by subtraction from the local Indigenous result in 2011. The median age, calculated by the ABS, is the age where half the population are older and half are younger. The average age is calculated assuming 70 average for Indigenous people aged 65+ and 75 for non-Indigenous people.

Source: Census 2011 Table I02; 2001 Table I02.

Statistically, generations are counted over the 15 years between four Censuses. The 'Babyboomer' generation, for example, was born between 1946 and 1961. These people were 50–64 years old in 2011, and include many current Indigenous leaders. Before them were born the veteran generations who are now the elders in Indigenous communities, aged over 65 in 2011. Younger adults are members of generations often called Gen X (born between 1961 and 1976) and Gen Y (born 1976 to 1991). They are the parents of the youngest full generation, Gen Z, born 1991 to 2006. Infants born since since 2006, aged under 5 in 2011, form part of the next, as yet unnamed generation.

group households	5	6	-	53	44	#VALUE!	6,293	4,728	#VALUE!
All households	191	143	-	1,897	1,938	#VALUE!	137,486	106,874	71,903
Av equivalised size	1.94	1.96	-	1.49	1.54	#VALUE!	1.86	1.87	1.91

The equivalence factor derived using the 'modified OECD' equivalence scale is built up by allocating points to each person in a household. Taking the first adult in the household as having a weight of 1 point, each additional person who is 15 years or older is allocated 0.5 points, and each child under the age of 15 is allocated 0.3 points. Equivalised household income is derived by dividing total household income by a factor equal to the sum of the equivalence points allocated to the household members. The equivalised income of a lone person household is the same as its unequivalised income. The equivalised income of a household comprising more than one person lies between the total value and the per capita value of its unequivalised income.

Adults are aged 15+. Percentages include 'not stated'.

Average incomes are calculated by multiplying the proportion in each income band by midpoint of band, using \$1,500 for the \$1,000+ band for indigenous, and more detailed data for high-income residents.

The median income for 2011 and 2006 is from the ABS. The 2001 median is the midpoint of the median range given by the ABS (eg \$600-699 becomes \$650).
